

Assignment 1

Jaswanth Chowdary Madala

- 1) Let $\vec{a} = \hat{i} + 4\hat{j} + 2\hat{k}$, $\vec{b} = 3\hat{i} - 2\hat{j} + 7\hat{k}$ and $\vec{c} = 2\hat{i} - \hat{j} + 4\hat{k}$. Find a vector \vec{d} which is perpendicular to both \vec{a} and \vec{b} , and $\vec{c} \cdot \vec{d} = 15$.

Solution: The vector perpendicular to both \mathbf{A} and \mathbf{B} has the direction that of $\mathbf{A} \times \mathbf{B}$.

Here we have

$$\mathbf{A} = \begin{pmatrix} 1 \\ 4 \\ 2 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 3 \\ -2 \\ 7 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 2 \\ -1 \\ 4 \end{pmatrix} \quad (0.0.1)$$

Given that vector \vec{d} is perpendicular to both \vec{a} and \vec{b} , and $\vec{c} \cdot \vec{d} = 15$

$$\mathbf{A}^\top \mathbf{D} = 0 \quad (0.0.2)$$

$$\mathbf{B}^\top \mathbf{D} = 0 \quad (0.0.3)$$

$$\mathbf{C}^\top \mathbf{D} = 15 \quad (0.0.4)$$

Joining all the equations in matrix form gives,

$$\begin{pmatrix} \mathbf{A}^\top \\ \mathbf{B}^\top \\ \mathbf{C}^\top \end{pmatrix} \mathbf{D} = \begin{pmatrix} 0 \\ 0 \\ 15 \end{pmatrix} \quad (0.0.5)$$

$$\begin{pmatrix} 1 & 4 & 2 \\ 3 & -2 & 7 \\ 2 & -1 & 4 \end{pmatrix} \mathbf{D} = \begin{pmatrix} 0 \\ 0 \\ 15 \end{pmatrix} \quad (0.0.6)$$

The augmented matrix for the system equations in 0.0.6 is expressed as

$$\left(\begin{array}{ccc|c} 1 & 4 & 2 & 0 \\ 3 & -2 & 7 & 0 \\ 2 & -1 & 4 & 15 \end{array} \right) \quad (0.0.7)$$

$$\begin{array}{c} R_2 \leftarrow R_2 - 3R_1 \\ \hline R_3 \leftarrow R_3 - 2R_1 \end{array} \quad (0.0.8)$$

$$\left(\begin{array}{ccc|c} 1 & 4 & 2 & 0 \\ 0 & -14 & 1 & 0 \\ 0 & -9 & 0 & 15 \end{array} \right) \quad (0.0.9)$$

$$\begin{array}{c} R_3 \leftarrow R_3 - \frac{9}{14}R_2 \\ \hline \end{array} \quad (0.0.10)$$

$$\left(\begin{array}{ccc|c} 1 & 4 & 2 & 0 \\ 0 & -14 & 1 & 0 \\ 0 & 0 & -\frac{9}{14} & 15 \end{array} \right) \quad (0.0.11)$$

The augmented matrix for the system equations is reduced to Row echelon form, From the above equation 0.0.11 we get the vector \mathbf{D} as

$$\mathbf{D} = \begin{pmatrix} \frac{160}{3} \\ -\frac{5}{3} \\ -\frac{70}{3} \end{pmatrix} \quad (0.0.12)$$
