

Assignment 1

Jaswanth Chowdary Madala

- 1) Find the equation of the hyperbola that satisfies the conditions - Foci $(\pm 4, 0)$, the latus rectum is of length 12.

Solution: The equation of the conic with focus \mathbf{F} , directrix $\mathbf{n}^\top \mathbf{x} = c$ and eccentricity e is given by

$$\mathbf{x}^\top \mathbf{V} \mathbf{x} + 2\mathbf{u}^\top \mathbf{x} + f = 0 \quad (0.0.1)$$

where

$$\mathbf{V} \triangleq \|\mathbf{n}\|^2 \mathbf{I} - e^2 \mathbf{n} \mathbf{n}^\top \quad (0.0.2)$$

$$\mathbf{u} \triangleq ce^2 \mathbf{n} - \|\mathbf{n}\|^2 \mathbf{F} \quad (0.0.3)$$

$$f \triangleq \|\mathbf{n}\|^2 \|\mathbf{F}\|^2 - c^2 e^2 \quad (0.0.4)$$

Given that the conic has foci as

$$\mathbf{F}_1 = \begin{pmatrix} 4 \\ 0 \end{pmatrix} \quad (0.0.5)$$

$$\mathbf{F}_2 = \begin{pmatrix} -4 \\ 0 \end{pmatrix} \quad (0.0.6)$$

The direction vector of $F_1 F_2$ is given by

$$\mathbf{m} = \mathbf{F}_1 - \mathbf{F}_2 \quad (0.0.7)$$

$$= \begin{pmatrix} 1 \\ 0 \end{pmatrix} \quad (0.0.8)$$

Hence the normal to the directrix is given by,

$$\mathbf{n} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \quad (0.0.9)$$

Thus,

$$\mathbf{V} = \begin{pmatrix} 1 - e^2 & 0 \\ 0 & 1 \end{pmatrix} \quad (0.0.10)$$

$$\mathbf{u} = ce^2 \begin{pmatrix} 1 \\ 0 \end{pmatrix} - \mathbf{F} \quad (0.0.11)$$

$$f = \|\mathbf{F}\|^2 - c^2 e^2 \quad (0.0.12)$$

The centre of the conic is given by

$$\mathbf{c} = \frac{\mathbf{F}_1 + \mathbf{F}_2}{2} \quad (0.0.13)$$

$$\mathbf{c} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad (0.0.14)$$

$$\mathbf{c} = -\mathbf{V}^{-1} \mathbf{u} \quad (0.0.15)$$

Since $\mathbf{c} = \mathbf{0}$ and $\mathbf{V}^{-1} \neq \mathbf{0}$, it follows from (0.0.15) that

$$\mathbf{u} = \mathbf{0} \quad (0.0.16)$$

Thus, from (0.0.11),

$$\mathbf{F} = \begin{pmatrix} ce^2 \\ 0 \end{pmatrix} \quad (0.0.17)$$

and so,

$$ce^2 = 4 \quad (0.0.18)$$

$$f = c^2 e^2 (e^2 - 1) \quad (0.0.19)$$

Given that the conic has the latus rectum length 12,

$$l = 2 \frac{\sqrt{|f_0 \lambda_2|}}{\lambda_1} \quad (0.0.20)$$

$$f_0 = \mathbf{u}^\top \mathbf{V}^{-1} \mathbf{u} - f \quad (0.0.21)$$

$$= -f \quad (0.0.22)$$

$$= -c^2 e^2 (e^2 - 1) \quad (0.0.23)$$

From equation (0.0.10) the eigen values λ_1, λ_2 are given by,

$$\lambda_1 = 1 - e^2 \quad (0.0.24)$$

$$\lambda_2 = 1 \quad (0.0.25)$$

Substituting the expressions of $\lambda_1, \lambda_2, f_0$ from the equations (0.0.23), (0.0.24), (0.0.25) in (0.0.20) gives

$$l = \frac{2ce}{\sqrt{e^2 - 1}} = 12 \quad (0.0.26)$$

$$\frac{ce}{\sqrt{e^2 - 1}} = 6 \quad (0.0.27)$$

Substitute the expression of c from (0.0.18)

gives,

$$\frac{4}{e\sqrt{e^2-1}} = 6 \quad (0.0.28)$$

$$(0.0.29)$$

Squaring on both sides gives,

$$9e^2(e^2-1) = 4 \quad (0.0.30)$$

$$9e^4 - 9e^2 - 4 = 0 \quad (0.0.31)$$

The equation (0.0.31) is a quadratic equation in e^2

$$e^2 = \frac{-(-9) \pm \sqrt{(-9)^2 - 4 \times 9 \times (-4)}}{2 \times 9} \quad (0.0.32)$$

$$e^2 = \frac{4}{3} \quad (0.0.33)$$

From equation (0.0.18), (0.0.19), we get

$$f = 4 \quad (0.0.34)$$

The equation of the conic is given by

$$\mathbf{x}^\top \begin{pmatrix} -\frac{1}{3} & 0 \\ 0 & 1 \end{pmatrix} \mathbf{x} + 4 = 0 \quad (0.0.35)$$

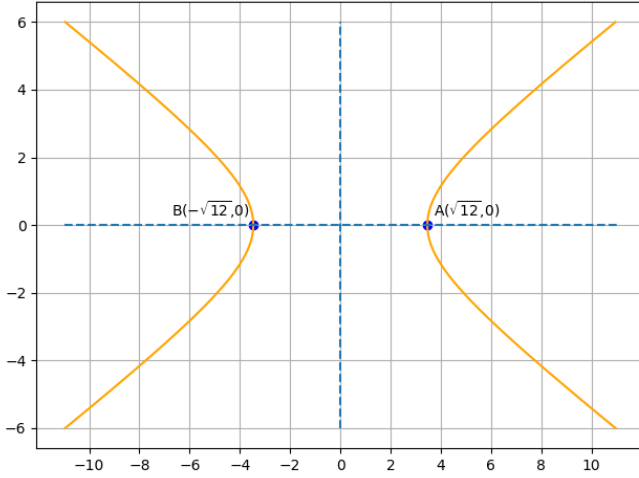

Fig. 1: Graph

Parameter	Description	Value
\mathbf{F}_1	Focus 1 of hyperbola	$\begin{pmatrix} 4 \\ 0 \end{pmatrix}$
\mathbf{F}_2	Focus 2 of hyperbola	$\begin{pmatrix} -4 \\ 0 \end{pmatrix}$
l	Length of latus rectum	12
