

Assignment 1

Jaswanth Chowdary Madala

1) A coin is tossed three times, where. Determine $\Pr(E | F)$ where

a) E : head on third toss, F : heads on first two tosses

b) E : at least two heads, F : at most two heads

c) E : at most two tails, F : at least one tail

Solution: Consider the random variables X_1, X_2, X_3, X , which denotes the first, second, third toss and number of heads in the 3 tosses respectively as described in table 1.

RV	Values	Description
X	$\{0, 1, 2, 3\}$	Number of heads in 3 tosses
X_1	$\{0, 1\}$	0: Heads , 1: Tails
X_2	$\{0, 1\}$	0: Heads , 1: Tails
X_3	$\{0, 1\}$	0: Heads , 1: Tails

TABLE 1: Random variables X_1, X_2, X_3, X

The random variable X follows binomial distribution

$$X = X_1 + X_2 + X_3 \quad (0.0.1)$$

The PMF of the random variable X is given by,

$$P_X(n) = \begin{cases} {}^3C_0 \left(\frac{1}{2}\right)^0 \left(\frac{1}{2}\right)^3 = \frac{1}{8} & n = 0 \\ {}^3C_1 \left(\frac{1}{2}\right)^1 \left(\frac{1}{2}\right)^2 = \frac{3}{8} & n = 1 \\ {}^3C_2 \left(\frac{1}{2}\right)^2 \left(\frac{1}{2}\right)^1 = \frac{3}{8} & n = 2 \\ {}^3C_3 \left(\frac{1}{2}\right)^3 \left(\frac{1}{2}\right)^0 = \frac{1}{8} & n = 3 \end{cases} \quad (0.0.2)$$

The CDF of the random variable X is given by,

$$F_X(n) = \Pr(X \leq n) \quad (0.0.3)$$

From the equation (0.0.3) we get,

$$F_X(n) = \begin{cases} 0 & n < 0 \\ \frac{1}{8} & 0 \leq n < 1 \\ \frac{1}{2} & 1 \leq n < 2 \\ \frac{7}{8} & 2 \leq n < 3 \\ 1 & \text{otherwise} \end{cases} \quad (0.0.4)$$

a) The events E, F can be described by the RV

as

$$E : X_3 = 0 \quad (0.0.5)$$

$$F : X_1 + X_2 = 0 \quad (0.0.6)$$

The required probability is given by,

$$\Pr(X_3 = 0 | X_1 + X_2 = 0) \quad (0.0.7)$$

$$= \frac{\Pr(X = 0)}{\Pr(X_1 + X_2 = 0)} \quad (0.0.8)$$

$$= \frac{1}{2} \quad (0.0.9)$$

b) The events E, F, F' can be described by the RV as

$$E : X \leq 1 \quad (0.0.10)$$

$$F : X \geq 1 \quad (0.0.11)$$

$$F' : X = 0 \quad (0.0.12)$$

The required probability is given by,

$$= \frac{\Pr(X = 1)}{1 - \Pr(X = 0)} \quad (0.0.13)$$

$$= \frac{\frac{3}{8}}{1 - \frac{1}{8}} \quad (0.0.14)$$

$$= \frac{3}{7} \quad (0.0.15)$$

c) For the events E, F , their complements are E' : all 3 tails, F' : zero tails. The events E', F' can be described by the RV as

$$E' : X = 3 \quad (0.0.16)$$

$$F' : X = 0 \quad (0.0.17)$$

By using property of conditional probability we have,

$$\Pr(E | F) = \frac{\Pr(EF)}{\Pr(F)} \quad (0.0.18)$$

$$= \frac{1 - \Pr(E' \text{ or } F')}{\Pr(F)} \quad (0.0.19)$$

The required probability is given by,

$$= \frac{1 - \Pr(X = 0 \text{ or } 3)}{1 - \Pr(X = 0)} \quad (0.0.20)$$

$$= \frac{1 - \left(\frac{1}{8} + \frac{1}{8}\right)}{1 - \frac{1}{8}} \quad (0.0.21)$$

$$= \frac{6}{7} \quad (0.0.22)$$
