## Assignment 1

## Jaswanth Chowdary Madala

1) Point  $\mathbf{R}(h, k)$  divides a line segment between the axes in the ratio 1: 2. Find equation of the line.

**Solution:** Let the line segment between the axes be AB, with point A on X-axis, B on Y-axis. Let the points A, B be

$$\mathbf{A} = \begin{pmatrix} \alpha \\ 0 \end{pmatrix}, \ \mathbf{B} = \begin{pmatrix} 0 \\ \beta \end{pmatrix} \tag{0.0.1}$$

Given that  $\frac{AR}{RB} = \frac{1}{2}$ . By using section formula, we get

$$\mathbf{R} = \frac{2\mathbf{A} + \mathbf{B}}{3} \tag{0.0.2}$$

$$\binom{h}{k} = \frac{1}{3} \binom{2\alpha}{\beta} \tag{0.0.3}$$

$$h = \frac{2\alpha}{3} \tag{0.0.4}$$

$$k = \frac{\beta}{3} \tag{0.0.5}$$

$$\mathbf{A} = \begin{pmatrix} \frac{3h}{2} \\ 0 \end{pmatrix}, \ \mathbf{B} = \begin{pmatrix} 0 \\ 3k \end{pmatrix} \tag{0.0.6}$$

The direction vector of the line is given by,

$$\mathbf{m} = \mathbf{R} - \mathbf{B} \tag{0.0.7}$$

$$\mathbf{m} = \begin{pmatrix} h \\ -2k \end{pmatrix} \tag{0.0.8}$$

The normal vector to the line is given by,

$$\mathbf{n} = \begin{pmatrix} 2k \\ h \end{pmatrix} \tag{0.0.9}$$

The equation of line is given by,

$$\mathbf{n}^{\mathsf{T}}\mathbf{x} = \mathbf{n}^{\mathsf{T}}\mathbf{B} \tag{0.0.10}$$

$$(2k \quad h) \mathbf{x} = (2k \quad h) \begin{pmatrix} 0 \\ 3k \end{pmatrix}$$
 (0.0.11)

$$\begin{pmatrix} 2k & h \end{pmatrix} \mathbf{x} = 3hk \tag{0.0.12}$$

The equation of the line is given by,  $(2k \ h)\mathbf{x} = 3hk$
